

Product Requirements Document — Home Visit Doctor Platform

Document version: 1.1 (MVP-simplified, submission draft) **Date:** 26 July 2026 **Status:** Pending client decisions (see Section 24)

Document Control

Version	Date	Change
1.0	25 Jul 2026	Initial PRD (full scope)
1.1	26 Jul 2026	MVP-simplified: advanced filters, complex payments, analytics, admin panel, chat, ratings, follow-up moved to R2/R3/R4/Phase G. Decision cross-references corrected to match renumbered Section 24 table.

How to use this document: Each requirement is tagged with an ID (e.g. FR-3.2) for traceability into QA test cases and future change requests. Items marked **[DECISION NEEDED]** block build start on that module and are consolidated in Section 24.

How phases work in this document: Release 1 (MVP) through Release 4 are **money/billing milestones** — each is an independently deliverable, independently payable chunk of the product. Section 26.3 additionally breaks each release into smaller delivery checkpoints — those are *not* separate billing gates, just a sequencing aid within a release.

0. Executive Summary

The platform lets patients find doctors, book home visits, and receive prescriptions and visit notes — fully independent of hospital workflows, with a free/discounted follow-up mechanism. It extends an existing doctor portal (hospital-facing) to also serve home visits, and introduces a new patient-facing portal. Payments are handled by a separate, cross-platform payments module shared by all money flows (doctor subscriptions, hospital subscriptions, hospital→doctor assignment payouts, and patient→doctor home visit payments).

1. Scope

1.1 In Scope (MVP — Release 1)

- Patient registration and basic profile (email/phone, name, address)
- Doctor search by specialty, location, name, symptoms
- Doctor availability configuration for home visits
- End-to-end booking flow with basic status lifecycle
- Doctor-configurable consultation fees (base flat fee)
- Digital visit notes and prescriptions

- Basic payment — full upfront via Razorpay (online only)
- Basic notifications (push + email for confirmed, en route, completed)
- Google Maps integration (address autocomplete, geocoding, distance, ETA)
- Security & compliance baseline for healthcare data

1.2 Out of Scope (MVP) — see Release 2/3/4 and Phase G

- Advanced search filters (gender, language, deposit filter)
- Multiple fee models and surcharges (tiered, time-based, distance-based, night/emergency charges)
- Deposit + balance payment models, milestone payments, post-visit payments
- Payout automation, invoicing, disputes workflow
- Doctor↔Patient chat
- Free follow-up visits
- Ratings & reviews
- SMS notifications
- Admin panel (verification, booking oversight, fraud, analytics)
- Family members module
- Favorites and saved payment methods
- Route optimization and live location sharing
- Reports & analytics dashboard
- WhatsApp notifications, voice-note dictation

1.3 Assumptions

- The existing Doctor Portal and its hospital-facing modules (Dashboard, Schedule, Leave Management, Earnings, Fees, Profile, Credentials, Specialties, Ratings, Subscriptions, Chat, Alerts, Settings, Support Tickets) are stable and their data models can be extended rather than rebuilt.
- Razorpay (or equivalent) is the payment gateway of record.
- Google Maps Platform is the geolocation/mapping provider of record.
- A single doctor can operate under both hospital-assignment and independent home-visit workflows simultaneously.
- Patients and doctors are in the same country/currency zone (no multi-currency).

1.4 Glossary

Term	Meaning
Home Visit	A consultation delivered by a doctor at the patient's chosen address
Deposit	Partial upfront payment required to confirm a booking
Follow-up	A subsequent visit for the same medical issue, eligible for free/discounted pricing
ETA	Estimated time of arrival, calculated from doctor location + travel time
Payout	Transfer of collected patient payments to the doctor's bank/UPI account
No-show	Either party not present/available at the confirmed visit time

2. Stakeholders & User Roles

Role	Description	Primary Surface
Patient	Books and receives home visits	Patient Portal (new)
Doctor	Delivers home visits, sets availability/pricing, writes notes & prescriptions	Doctor Portal (existing, extended)
Hospital	Unaffected by home visits except shared doctor profile data	Existing Hospital Portal
Admin	Verifies doctors, manages disputes/refunds, monitors platform	Admin Panel
Call Center Agent (subset of Admin)	Creates manual bookings on behalf of patients	Admin Panel

3. Patient Registration & Onboarding

3.1 Sign-up Methods [DECISION NEEDED — see Q1]

ID	Requirement
FR-3.1.1	System shall support email + password + phone sign-up
FR-3.1.2	System shall support phone OTP-only sign-up
FR-3.1.3	System shall support social login (Google/Apple) with mandatory phone verification

3.2 Profile Fields

ID	Requirement
FR-3.2.1	Capture name, phone, email, date of birth, gender, blood group
FR-3.2.2	Support multiple saved addresses (e.g. Home, Office, Parents' house) with add/edit/delete and a single default
FR-3.2.3	Capture emergency contact: name, relationship, phone

3.3 Family Members Module

ID	Requirement
FR-3.3.1	Patient can add family members (spouse, children, parents, other)
FR-3.3.2	Per member: name, age, gender, blood group, medical conditions (free text or tags), relationship
FR-3.3.3	At booking time, patient selects "For myself" or "For [family member]"
FR-3.3.4	Family member records are editable/removable by the owning patient account only

3.4 Consent

ID	Requirement
FR-3.4.1	Capture explicit consent for storing medical data (mandatory, blocking)
FR-3.4.2	Capture optional consent for sharing prescriptions with the patient's chosen pharmacy
FR-3.4.3	Consent decisions are timestamped and stored in the audit log
FR-3.4.4	Patient can revoke sharing consent at any time from Profile settings

4. Doctor Search & Discovery

4.1 Search Criteria

ID	Requirement	Phase
FR-4.1.1	Search by specialty (cardiology, dermatology, pediatrics, gynecology, etc.)	MVP
FR-4.1.2	Search by location: city, pincode, or current GPS location	MVP
FR-4.1.3	Search by doctor name	MVP
FR-4.1.4	Search by symptoms/reason as free text	MVP
FR-4.1.5	Filter by doctor gender preference: Male / Female / Any	Release 2

4.2 Filters

ID	Requirement	Phase
FR-4.2.1	Home-visit-eligible doctors only	MVP
FR-4.2.2	Within patient's travel radius or the doctor's declared working area	MVP
FR-4.2.3	Rating range slider	MVP
FR-4.2.4	Consultation fee range slider	MVP
FR-4.2.5	Availability badges: "Available in next 2 hrs", "Available Today", "Available Tomorrow"	Release 2
FR-4.2.6	Filter by whether an advance deposit is required	Release 3
FR-4.2.7	Filter by language spoken	Release 2

4.3 Sorting

ID	Requirement	Phase
FR-4.3.1	Sort by relevance (default), rating, distance, experience, fee	MVP

4.4 Doctor Profile (Patient-Facing View)

ID	Requirement	Phase
FR-4.4.1	Display photo, name, specialty, years of experience, overall rating	MVP
FR-4.4.2	Display home visit fee, travel radius/working areas, bio, credentials	MVP
FR-4.4.3	Display patient reviews, deposit requirement, languages	Release 2+

5. Doctor Availability

5.1 Availability Model [DECISION NEEDED — see Q2]

Option	Model
A	Shared calendar — existing slots tagged hospital / home_visit / both
B	Separate calendar — dedicated home-visit availability, independent of hospital slots
C	Date blocks — doctor marks available dates only; patient picks a window; doctor confirms exact time
D	Recurring weekly hours — e.g. Mon-Fri 6–9 PM, auto-repeats
E	On-demand — no preset slots; patient requests a time; doctor accepts if free

5.2 Additional Availability Rules

ID	Requirement
FR-5.2.1	Doctor can mark a vacation date range as unavailable
FR-5.2.2	Doctor can disable specific public-holiday dates
FR-5.2.3	Doctor sets a max-visits-per-day cap; slots hide once the cap is reached
FR-5.2.4	System auto-inserts a travel-time buffer between consecutive visits, calculated from distance between addresses
FR-5.2.5	Doctor selects specific working areas/localities as an alternative or supplement to a radius
FR-5.2.6	Doctor configures a fixed buffer time (minutes) between consecutive visits

6. Booking Flow

6.1 Steps

ID	Requirement
FR-6.1.1	Patient selects a doctor and views available home-visit slots
FR-6.1.2	Patient selects date & time slot
FR-6.1.3	Patient specifies visit-for: self or family member, with auto-filled demographic details

ID	Requirement
FR-6.1.4	Patient provides visit address (from saved addresses or new entry via address autocomplete)
FR-6.1.5	Patient completes a symptoms questionnaire — structured or free text [DECISION NEEDED — see Q11]
FR-6.1.6	Patient can attach previous prescriptions, blood reports, X-ray, MRI, ECG files [DECISION NEEDED — see Q10]
FR-6.1.7	Patient can add special instructions (free text)

6.2 Booking Summary (Pre-Payment)

ID	Requirement
FR-6.2.1	Display doctor name, date, time, visit address
FR-6.2.2	Display estimated arrival time, calculated from doctor's current/base location and travel time
FR-6.2.3	Display consultation fee plus any applicable surcharges (night, emergency)
FR-6.2.4	Display advance deposit amount if required
FR-6.2.5	Display free-follow-up eligibility if applicable to this booking

6.3 Confirmation

ID	Requirement
FR-6.3.1	Payment is processed per the Payments Module (Section 18)
FR-6.3.2	On success, booking status moves to Confirmed/Pending per Section 7, and notifications fire to both parties

7. Booking Status Lifecycle

7.1 State Machine

```

Requested
  ↓
Pending Confirmation (awaiting doctor)
  ↓
Confirmed (deposit paid or doctor accepted)
  ↓
Rescheduled (patient requests new time → doctor accepts)
  ↓
Doctor Cancelled / Patient Cancelled
  ↓
En Route (doctor started traveling)
  ↓
Arrived (doctor at patient's home)

```

7.2 Actions & Rules

ID	Requirement
FR-7.2.1	Doctor actions: Accept / Decline / En Route / Arrived / Complete / Mark No-Show
FR-7.2.2	Patient actions: Cancel / Request Reschedule
FR-7.2.3	System auto-cancels a booking if the doctor doesn't respond within a configurable X hours
FR-7.2.4	Every status transition is logged with actor, timestamp, and reason

7.3 Reschedule

ID	Requirement
FR-7.3.1	Patient requests a new date/time on an existing booking
FR-7.3.2	Doctor accepts or declines the reschedule request
FR-7.3.3	Original payment/deposit transfers to the new slot; no re-payment required unless fee differs
FR-7.3.4	Any fee difference (e.g., peak vs off-peak) is charged or refunded as applicable

8. Consultation Fees (Doctor-Configurable)

8.1 Base Fee Structure [DECISION NEEDED — see Q3]

Option	Model
A	Single flat fee for all home visits
B	Tiered — first-visit fee + lower follow-up fee
C	Time-based — peak hour/weekend surcharge vs off-peak
D	Distance-based — base fee + per-km surcharge
E	Per-specialty — different fee if the doctor practices multiple specialties

8.2 Additional Surcharges [DECISION NEEDED — see Q4]

ID	Requirement
FR-8.2.1	Night charge (10 PM–6 AM)

ID	Requirement
FR-8.2.2	Emergency charge for visits requested within 1 hour
FR-8.2.3	Medicine charge — doctor-carried medicines, included or billed separately
FR-8.2.4	Nursing charge — additional fee if a nurse accompanies the doctor

8.3 Configuration Surface

ID	Requirement
FR-8.3.1	All fee and surcharge settings are editable by the doctor under Doctor Portal → Home Visit Settings
FR-8.3.2	Fee changes apply to new bookings only; already-confirmed bookings retain the fee shown at booking time

9. Doctor's Visit Notes

ID	Requirement
FR-9.1	Doctor records diagnosis/observations after the visit
FR-9.2	Doctor records treatment given
FR-9.3	Doctor records advice/recommendations
FR-9.4	Doctor records follow-up instructions
FR-9.5	Doctor can issue a sick leave certificate where applicable
FR-9.6	Doctor can record lab test / investigation recommendations
FR-9.7	Doctor can record referral notes
FR-9.8	Doctor can upload images (wound photos, skin images, etc.), optional
FR-9.9	Voice-note dictation — future scope, placeholder UI only
FR-9.10	Patient can view visit notes in booking history and download as PDF

10. Digital Prescriptions

10.1 Authoring [DECISION NEEDED — see Q8]

ID	Requirement
FR-10.1.1	Doctor enters medicine name, dosage, duration, timing, instructions per line item
FR-10.1.2	Doctor may optionally attach an ICD-10 diagnosis code
FR-10.1.3	Prescription carries the doctor's digital signature

10.2 Prescription Features

ID	Requirement
FR-10.2.1	Patient can view full prescription history
FR-10.2.2	Doctor can reissue ("duplicate") a previous prescription
FR-10.2.3	Prescription is downloadable/printable as PDF
FR-10.2.4	Prescription is shareable with a pharmacy, via WhatsApp, or via email
FR-10.2.5	Medicine availability check against pharmacy inventory — future scope

11. Free Follow-Up Visit

11.1 Policy [DECISION NEEDED — see Q14]

Option	Policy
A	Free within X days, same issue, doctor-marked eligible
B	Discounted follow-up (e.g., 50%)
C	No free follow-up offered

11.2 Flow

ID	Requirement
FR-11.2.1	Follow-up eligibility is never automatic — doctor must explicitly mark the original visit as "follow-up eligible"
FR-11.2.2	Eligible patients see a "Free Follow-Up" badge on their booking history / doctor profile
FR-11.2.3	Booking a follow-up slot auto-waives the fee per the selected policy
FR-11.2.4	System sends an expiry notification before the follow-up window closes
FR-11.2.5	Follow-up window length (X days) is platform-configurable, with a doctor-level override if enabled

12. Doctor Portal — Feature Extensions

12.1 Existing Features Requiring Extension

Feature	Status	Home Visit Extension
Dashboard	Built	Add home visit stats
Schedule / Availability	Built	Add home visit slots (per Section 5 model)
Leave Management	Built	Shared as-is
Assignments	Built	New: home visit bookings appear alongside hospital assignments

Feature	Status	Home Visit Extension
Earnings & Transactions	Built	Add home visit earnings breakdown
Fees Management	Built	Add home visit consultation fee & surcharges
Profile & Photos	Built	Shared as-is
Credentials	Built	Shared as-is
Specialties	Built	Shared as-is
Hospital Affiliations	Built	Not applicable to home visits
Ratings & Reviews	Built	Home visit ratings feed into the same overall rating
Subscriptions	Built	Shared as-is
Chat with Hospitals	Built	Extend to support chat with patients (Section 13)
Alerts / Notifications	Built	Add home visit notification events
Settings	Built	Add home visit settings
Support Tickets	Built	Shared as-is

12.2 New Doctor Portal Features

ID	Feature	Requirement
FR-12.2.1	Home Visit Toggle	Doctor enables/disables home visit availability entirely
FR-12.2.2	Home Visit Availability	Manage dedicated slots per the chosen model (Section 5)
FR-12.2.3	Consultation Fee Setting	Configure fee model and surcharges (Section 8)
FR-12.2.4	Travel Radius / Working Areas	Define where the doctor is willing to travel
FR-12.2.5	Max Visits Per Day	Configure daily cap
FR-12.2.6	Booking Management	Accept/decline incoming home visit requests
FR-12.2.7	Today's Route	Map view of the day's confirmed visits with patient locations and ETA
FR-12.2.8	Patient History	View a patient's past visits with this doctor before arriving
FR-12.2.9	Visit Notes	Author diagnosis/notes, upload images (Section 9)
FR-12.2.10	Digital Prescriptions	Write & sign prescriptions (Section 10)
FR-12.2.11	Free Follow-up Management	Mark visits as follow-up eligible (Section 11)
FR-12.2.12	Chat with Patients	Extend existing chat infrastructure (Section 13)
FR-12.2.13	Home Visit Earnings	Separate earnings breakdown from hospital-assignment earnings

13. Doctor-Patient Chat

13.1 Existing Chat (Reused Infrastructure)

Doctor↔Hospital chat already supports: text, attachments, reactions, reply, edit, delete, read receipts, via a reusable ChatPage component.

13.2 New: Doctor↔Patient Chat

ID	Requirement
FR-13.2.1	Extend senderType enum from doctor / hospital to also include patient
FR-13.2.2	Support a Doctor↔Patient conversation model with no hospital participant
FR-13.2.3	Auto-create the conversation thread when a home visit booking is confirmed
FR-13.2.4	Doctor sees confirmed patients in their chat contact list
FR-13.2.5	Patient sees a new Chat page in the patient portal
FR-13.2.6	Feature parity with existing chat: text, images, file sharing
FR-13.2.7	Push notification fires on new message

14. Patient Portal

Page	Requirement
Search Doctors	Search, filter, and browse per Section 4
Doctor Profile	Details, ratings, fees, availability, deposit info
Book Visit	Slot selection, questionnaire, attachments, payment (Section 6)
My Bookings	Upcoming & past visits; cancel; reschedule
Booking Detail	Doctor info, address, status timeline, ETA, live location (if enabled), notes, prescription
Medical History	Consolidated past visits, diagnoses, prescriptions, reports
Prescriptions	Full history, PDF download, reprint
Doctor's Notes	All visit summaries
Invoices	Payment receipts, downloadable
Addresses	Manage multiple saved addresses
Family Members	Add/edit/remove; book for any member
Free Follow-Ups	List of available follow-ups, one-tap booking
Favorites	Saved/bookmarked doctors
Profile	Personal details, emergency contact
Payment Methods	Saved cards/UPI

Page	Requirement
Chat	Chat with doctor(s)
Notifications	Full history + channel preferences
Support	Raise booking/payment issues

15. Ratings & Reviews

ID	Requirement
FR-15.1	Patient rates the doctor 1-5 stars after a completed visit
FR-15.2	Optional written review accompanies the star rating
FR-15.3	Home visit rating feeds into the doctor's single overall average rating (combined with hospital ratings)
FR-15.4	Admin can review flagged/reported reviews
FR-15.5	Doctor can post a public reply to a review
FR-15.6	Admin can hide/remove abusive reviews

[DECISION NEEDED — see Q15]

Option	Policy
A	Review is mandatory to close out a booking
B	Review is optional
C	Doctor can also rate the patient (no-show flag, behavior)

16. Notifications

16.1 Channels **[DECISION NEEDED — see Q12]**

ID	Requirement
FR-16.1.1	Push (in-app), configurable per user
FR-16.1.2	SMS, configurable per user
FR-16.1.3	Email, configurable per user
FR-16.1.4	WhatsApp — future scope

16.2 Notification Events

Event	Patient	Doctor
Booking requested	—	New request

Event	Patient	Doctor
Booking confirmed	Confirmation + ETA	Confirmed
Deposit required	Payment prompt	Awaiting deposit
Deposit received	—	Confirmed
Reschedule request	—	Patient wants new time
Reschedule accepted	New time confirmed	—
Doctor en route	On-the-way alert + ETA	—
Doctor arrived	Arrival alert	—
Visit completed	Thank-you + rate-visit prompt	—
Balance payment due	Payment prompt	—
Payment received	Receipt	Payment received
Prescription ready	Availability alert	—
Follow-up available	"Expires in X days"	—
New chat message	New message alert	New message alert
Reminders	24 hr / 1 hr / 30 min before	Same
Cancellation	Cancellation confirmation	Patient cancelled
No-show	—	Patient marked no-show
Payout received	—	Payout credited

17. Cancellation & Refund Policy

Scenario	Refund
Patient cancels > 24 hrs before visit	100%
Patient cancels 6-24 hrs before visit	50%
Patient cancels < 6 hrs before visit	No refund (deposit forfeited)
Doctor cancels	100% refund to patient
Patient no-show	Deposit forfeited
Doctor no-show	Full refund + optional platform compensation to patient

[DECISION NEEDED — see Q9]: Confirm exact cancellation-window thresholds and whether globally fixed or platform-admin-configurable.

18. Payments Module (Separate Cross-Platform Service)

Phasing: MVP ships with **Full Upfront payment (online-only via Razorpay)**. Deposit models, payout automation, invoicing, and disputes ship in Release 3.

18.1 Money Flows

Flow	From → To	Patient Involved?	Phase
Doctor Subscription	Doctor → Platform	No	Existing
Hospital Subscription	Hospital → Platform	No	Existing
Hospital Assignment Payment	Hospital → Doctor	No	Existing (table-only)
Home Visit Payment	Patient → Platform (holds)	Yes	MVP
Doctor Payout	Platform → Doctor	No	Release 3

During MVP, the platform collects full payment from the patient and holds it. Doctor payouts happen manually (outside the platform) until Release 3 auto-payout ships.

18.2 Platform Commission [DECISION NEEDED — see Q6]

Option	Model	Phase
A	No commission — patient payment goes to doctor minus gateway fees only; subscriptions are the sole platform revenue	MVP
B	Per-transaction commission — platform takes a % or flat fee on top of subscriptions	MVP

18.3 Payment Models [DECISION NEEDED — see Q5]

Model	Mechanics	Phase
Full upfront	100% charged at booking; instant confirmation	MVP
Deposit + balance	X% deposit at booking, remainder after completion	Release 3
Doctor-required deposit	Doctor sets a minimum deposit; booking confirms only once paid	Release 3
Milestone-based	Deposit → confirmed; 2nd charge → en route; final charge → completed	Release 3
Post-visit	No upfront charge; full payment after the visit	Release 3

18.4 Payment Status Lifecycle — MVP

Created → Pending → Authorized → Captured → Completed

↓

Failed → Retry

Refunded / Partially Refunded / Expired

18.5 Payment Methods

ID	Requirement	Phase
FR-18.5.1	Online: cards, UPI, netbanking, wallet via Razorpay	MVP
FR-18.5.2	Offline: cash — doctor marks "Paid Offline"; admin verifies	Release 3
FR-18.5.3	Saved payment methods for repeat patients	Release 4

18.6 Key Features

ID	Feature	Requirement	Phase
FR-18.6.1	Payment retries	Failed payment retry mechanism	MVP
FR-18.6.2	Webhook handling	Razorpay webhooks processed for async status updates	MVP
FR-18.6.3	Invoice generation	Auto-generated per transaction, with GST support	Release 3
FR-18.6.4	Manual verification	Admin marks offline/cash payments as verified	Release 3
FR-18.6.5	Admin adjustment	Manual refund, partial refund, correction entries	Release 3
FR-18.6.6	Dispute management	Patient/doctor raises dispute → admin reviews → hold/release/refund	Release 3
FR-18.6.7	Payment audit log	Every status change logged with actor + timestamp	MVP
FR-18.6.8	Payout failure handling	Invalid bank details trigger retry + doctor notification	Release 3

18.7 Doctor Payout Account — Release 3

ID	Requirement
FR-18.7.1	Capture bank name, account number, IFSC
FR-18.7.2	Capture UPI ID
FR-18.7.3	Track verification status: pending / verified / rejected
FR-18.7.4	Support multiple payout accounts per doctor (optional)

18.8 Payout Schedule — Release 3

During MVP, doctor payouts are reconciled and disbursed manually outside the platform. Automated payout scheduling ships in Release 3.

Option	Schedule
Daily	Auto-payout every day for completed visits
Weekly	Every Monday for the previous week

Option	Schedule
Monthly	1st of month for the previous month
Threshold	Auto-payout once pending balance crosses ₹X
Manual	Admin manually triggers payout

19. Admin Panel (Release 3)

19.1 Doctor Verification

ID	Requirement
FR-19.1.1	Verify medical license, identity proof, address proof, bank account
FR-19.1.2	Approve/reject home-visit eligibility separately from general doctor approval

19.2 Booking Management

ID	Requirement
FR-19.2.1	View all bookings, filterable by status, date, doctor, patient
FR-19.2.2	Manual booking creation for call-center-assisted bookings
FR-19.2.3	Resolve disputes and process refunds
FR-19.2.4	Flag repeat-offending doctors or patients

19.3 Fraud Detection

ID	Requirement
FR-19.3.1	Track frequent cancellations, no-show patterns, other abuse signals
FR-19.3.2	Blacklist or flag accounts

19.4 Payment Monitoring

ID	Requirement
FR-19.4.1	View all transactions across all money flows
FR-19.4.2	View pending deposits, balances, and payouts
FR-19.4.3	Manage payout failures

19.5 System Settings (Platform-Wide) — Release 4

ID	Setting
FR-19.5.1	Default deposit %
FR-19.5.2	Cancellation windows

ID	Setting
FR-19.5.3	Commission rates (if applicable)
FR-19.5.4	Follow-up window (days)
FR-19.5.5	Max travel distance, max visits/day (platform defaults; doctor may override within bounds)
FR-19.5.6	Night/emergency charge defaults

19.6 Audit Logs

ID	Requirement
FR-19.6.1	Log all payment status changes
FR-19.6.2	Log all booking status changes
FR-19.6.3	Log all admin actions

20. Reports & Analytics — Phase G

Reports & Analytics are deferred to Phase G (see Section 23). The KPIs listed below are documented here for future reference, not for MVP build.

Notable KPIs: Revenue by city/specialty/doctor, doctor utilization rate, average response/travel/consultation metrics, repeat patient rate, follow-up conversion rate, cancellation rate, payment success/failure rate, refund amounts, doctor acceptance rate, average rating, peak booking hours, payout success/failure rate.

Export: Excel, PDF, CSV (FR-20.2.1).

21. Security & Compliance (Healthcare Data)

Baseline (RBAC, encryption, consent enforcement, audit logging) ships with MVP. Deeper compliance tooling (retention automation, formal audit reporting) is Release 4.

ID	Requirement	Phase
FR-21.1	Role-based access control for Patient, Doctor, Hospital, Admin	MVP
FR-21.2	Encrypt medical records, prescriptions, and personal data at rest and in transit	MVP
FR-21.3	Audit-log every change to medical records, prescriptions, and payments	MVP
FR-21.4	Enforce explicit patient consent for storing/sharing medical data	MVP
FR-21.5	Auto-delete/retention policy per applicable regulation, configurable duration	Release 4
FR-21.6	File upload security: virus scanning and file-type/size restrictions on all attachments	MVP
FR-21.7	Determine applicable compliance regime (GDPR / HIPAA / local health data law) based on target geography [DECISION NEEDED — see Q13]	MVP

22. Maps & Location Services (Google Maps Platform)

ID	Requirement
FR-22.1	Address autocomplete during patient address entry
FR-22.2	Geocoding — convert addresses to lat/lng
FR-22.3	Store doctor location as lat/lng from their primary address
FR-22.4	Distance calculation between doctor and patient, for radius filtering and distance-based fees
FR-22.5	Route optimization across a doctor's consecutive visits for the day
FR-22.6	ETA estimation shown at booking time and again when the doctor departs
FR-22.7	Live location sharing while doctor is en route — [DECISION NEEDED — see Q14]

23. Future Enhancements (Post-MVP — Phase G)

Features moved from earlier sections to keep MVP lean. Each becomes its own milestone once prioritized.

Release 2 Candidates

- Doctor↔Patient chat (extends existing chat infrastructure)
- Free follow-up booking (doctor-marked eligible, patient books discounted/free slot)
- Ratings & reviews (star rating + text review post-visit)
- Reschedule flow (move booking without losing payment)
- SMS notifications (reminder texts, cancellation alerts)
- Advanced search filters: gender preference (FR-4.1.6), language (FR-4.2.7), availability badges (FR-4.2.5)

Release 3 Candidates

- Advanced fee models: tiered, time-based, distance-based, per-specialty pricing (Section 8.1 B-E)
- Surcharges: night, emergency, medicine, nursing (Section 8.2)
- Deposit + balance payment model (X% at booking, remainder after visit)
- Milestone-based payments (deposit → confirmed, 2nd charge → en route, final → completed)
- Post-visit payment (no upfront charge)
- Offline payments (cash — doctor marks paid, admin verifies)
- Doctor payout account setup (bank/UPI capture, verification)
- Automated payout scheduling (daily/weekly/monthly/threshold/manual)
- Invoice generation with GST support
- Dispute management workflow (patient/doctor raises dispute → admin review)
- Admin panel core: doctor verification, booking oversight, fraud detection, payment monitoring
- Route optimization for doctor's consecutive visits (FR-22.5)
- Live location sharing while en route (FR-22.7)

Release 4 Candidates

- Admin settings & reports: platform-wide config, KPI dashboard, report exports (Section 19.5–19.6, 20)
- Compliance hardening: retention automation, GDPR/HIPAA-specific controls (beyond baseline RBAC/encryption)
- Family members module: book on behalf of spouse/children/parents
- Favorites list & saved payment methods for repeat patients

Future Unsequenced

- AI-assisted symptom triage
- Wearable device integration
- Subscription plans for frequent home visits
- Home nursing services
- Vaccination at home
- Ambulance booking
- Multi-language UI
- WhatsApp notifications
- Voice-note dictation for visit notes

24. Client Decisions Needed (Blocking)

These decisions must be made before development begins. Items marked Release 2+ do not block MVP but should be decided early for architectural consistency.

#	Category	Question	Options	Blocks	Phase
1	Patient onboarding	How do patients sign up for the MVP?	Full registration / Phone OTP / Social login	Section 3	MVP
2	Availability model	How should home visit slots work?	Shared (same as hospital) / Separate / Date blocks / Recurring hours / On-demand	Section 5	MVP
3	Consultation fee	MVP pricing structure?	Flat fee / Tiered by specialty / Time-based / Distance-based	Section 8	MVP
4	Surcharges	Allow extra charges for night, emergency, medicine, nursing?	Yes (doctor configures) / No	Section 8	Release 3
5	Payment model	MVP payment model?	Full upfront / Deposit+balance / Milestone / Post-visit	Section 18.3	MVP
6	Platform charges	Commission on top of subscriptions?	No / Yes (% or flat fee)	Section 18.2	MVP
7	Cancellation window	Free cancellation up to how long before visit?	Platform-configurable (e.g. 24 / 6 / 2 hrs)	Section 17	MVP
8	Prescriptions	Digital signature verification for Rx?	Doctor self-signs / Admin audit / Both	Section 10.1	MVP

#	Category	Question	Options	Blocks	Phase
9	Geo model	Radius (km) or declared working areas?	Fixed radius / Named areas / Both	Section 5.2, 22	MVP
10	Attachments	Patient uploads medical files at booking?	Yes / No / Certain types only	Section 6.1	MVP
11	Symptoms questionnaire	How do patients describe their issue?	Structured dropdown / Free text / Both	Section 6.1	MVP
12	Notifications	Which channels for MVP?	Push+Email / Push+Email+SMS / +WhatsApp	Section 16	MVP
13	Security	Target compliance regime?	Standard / GDPR / HIPAA / Local health data law	Section 21	MVP
14	Free follow-up	Policy for free/ discounted follow-up visits?	Free within X days / Discounted / None	Section 11	Release 2
15	Reviews	Are post-visit ratings mandatory?	Mandatory / Optional / Doctor can reply / Admin-moderation	Section 15	Release 2
16	Doctor payouts	Auto-payout schedule for Release 3?	Daily / Weekly / Monthly / Threshold / Manual	Section 18.8	Release 3
17	Live location	Share doctor's live location during travel?	Yes / Optional / No	Section 22	Release 3
18	Offline payments	Allow cash payments in Release 3?	Yes (manual admin verification) / Online only	Section 18.5	Release 3

25. Non-Functional Requirements

ID	Category	Requirement
NFR-1	Performance	Doctor search results return within 2 seconds for a database of up to 50,000 active doctors
NFR-2	Scalability	Booking and payment services scale independently to handle city-level launch spikes
NFR-3	Availability	Core booking and payment paths target 99.9% uptime
NFR-4	Usability	Patient booking flow completable in ≤ 5 screens/steps on mobile
NFR-5	Platform support	Patient portal: responsive web. Doctor portal: existing platforms retained
NFR-6	Localization	UI text externalized for future multi-language support
NFR-7	Data integrity	All financial transactions are idempotent; retries never double-charge or double-payout
NFR-8	Observability	Booking, payment, and notification services emit structured logs and metrics
NFR-9	Disaster recovery	Patient medical records and payment records are backed up with a defined RPO/RTO

26. Module Breakdown & Phased Release Plan

This section groups the requirements above into modules, then sequences them into releases based on dependencies — so the platform can go live in stages rather than as one big-bang launch.

26.1 Module Map

#	Module	Covers (PRD sections)	Depends On	Phase
M1	Patient Identity & Profile	3 (registration, profile, family members, consent)	—	MVP (basic) + R4 (family)
M2	Doctor Portal — Home Visit Extension	5, 8, 12 (availability, fees, toggle, settings)	Existing doctor portal	MVP (basic) + R3 (advanced)
M3	Doctor Discovery	4 (search, filters, sorting, profile view)	M2	MVP (basic) + R2 (filters)
M4	Maps & Location Services	22 (geocoding, distance, ETA, routing)	— (foundational)	MVP (basic) + R3 (routing)
M5	Booking Engine	6, 7 (booking flow, status lifecycle, reschedule)	M1, M2, M3, M4	MVP + R2 (reschedule)
M6	Payments Integration	18 (charge, refund, payouts, invoicing, disputes)	M5	MVP (upfront) + R3 (depth)
M7	Visit Delivery	9, 10, 11 (visit notes, prescriptions, follow-up)	M5	MVP (notes+Rx) + R2 (follow-up)
M8	Doctor↔Patient Chat	13	M5	R2
M9	Notifications	16	M5	MVP (push+email) + R2 (SMS)
M10	Ratings & Reviews	15	M5, M7	R2
M11	Admin Panel — Core	19.1–19.4 (verification, booking oversight, fraud)	M5, M6	R3
M12	Admin Panel — Settings & Reports	19.5–19.6, 20	M11	R4
M13	Security & Compliance Hardening	21	Cross-cutting	MVP (baseline) + R4 (hardening)

26.2 How Modules Map to Milestones

The rule used to build the milestone table below:

- Take each module's Depends-On column from 26.1.
- For each dependency, ship only the minimum subset the next module needs. The rest upgrades it later without blocking anything downstream.
- Milestones are numbered in build order, not module order.

26.3 Milestone Plan

Phase A — Foundation (nothing patient-facing yet, but nothing else can start without it)

#	Milestone	Slice of	Deliverable
1	Patient auth + minimal profile	M1 (FR-3.1, FR-3.2.1)	Patient can sign up and log in. No addresses/family yet.
2	Doctor Portal: Home Visit Toggle + basic availability	M2 (FR-12.2.1, one availability model from Q2)	A doctor can flip on home visits and set slots. Internal-only, no patient sees it yet.
3	Maps: geocode + distance	M4 (FR-22.1-22.4)	Address → lat/long, and distance-between-two-points works as a callable service.

Phase B — Discovery + first booking (demoable, not yet payable)

#	Milestone	Slice of	Deliverable
4	Patient addresses	M1 (FR-3.2.2)	Patients can save/select an address — needed before booking has anywhere to send a doctor.
5	Doctor Discovery — search & profile view	M3 (FR-4.1, FR-4.4; filters deferred to Milestone 12)	Patient can search and land on a doctor profile page.
6	Booking flow (no payment gate)	M5 core (FR-6.1-6.2), status lifecycle up to "Confirmed" only (FR-7.1-7.2.1/2, no auto-cancel yet)	Patient can complete the booking form end-to-end; booking sits as "Confirmed" with no charge taken. First demo-ready milestone.

Phase C — Make it payable (Release-1-equivalent, now real)

#	Milestone	Slice of	Deliverable
7	Payments integration — home_visit flow, full upfront	M6 (Section 18.1, 18.3 "Full upfront" only, 18.4, 18.5.1 online only)	Existing Payments Module now accepts a real charge for a booking. This is the milestone that turns Booking into revenue.
8	Booking status lifecycle — full (En Route → Closed)	M5 remainder (FR-7.1 full diagram, FR-7.2.3 auto-cancel)	Doctor can run a visit start-to-finish through the app.
9	Visit Notes + Prescriptions	M7 core (Section 9, 10.1-10.2.3; follow-up deferred)	Doctor documents the visit; patient gets a downloadable prescription.
10	Notifications — Push + Email, core events only	M9 (booking confirmed / en route / arrived / completed / prescription ready)	Both sides know what's happening without checking the app.

→ This is the real, shippable **MVP / Release 1: Milestones 1-10**. Milestone 7 is the one that makes the product a business. After this, a patient can sign up, find a doctor, book, pay, get a visit, and receive a prescription — the minimum playable product.

Phase D — Retention loop (Release 2)

#	Milestone	Slice of	Deliverable
11	Doctor↔Patient Chat	M8	Auto-created thread on booking confirmation.
12	Reschedule flow	M5 extension (Section 7.3)	Patient can move a booking without losing payment.
13	Free Follow-up eligibility + booking	M7 extension (Section 11)	Doctor marks eligible, patient books free/discounted slot.
14	Ratings & Reviews	M10	Post-visit star rating + optional text review.
15	Notifications — add SMS	M9 extension	Reminder texts, cancellation SMS.
16	Doctor Discovery — advanced filters	M3 remainder (Section 4.1.6, 4.2.5, 4.2.7)	Gender preference, language, availability badges.

→ "Release 2": Milestones 11-16.

Phase E — Monetization depth & ops tooling (Release 3)

#	Milestone	Slice of	Deliverable
17	Advanced fee models + surcharges	M2 extension (Section 8.1 B-E, 8.2)	Doctor can price by tier/time/distance/specialty, toggle night/emergency/medicine/nursing charges.
18	Payments — deposit & refund matrix	M6 extension (Section 18.3 deposit models, Section 17)	Deposit-gated confirmation, automated refund % by cancellation window.
19	Payments — payout automation, invoicing, disputes	M6 extension (Section 18.6, 18.7, 18.8)	Doctor bank/UPI payout on schedule; GST invoices; dispute workflow.
20	Offline payments (cash)	M6 extension (FR-18.5.2)	Doctor marks "Paid Offline"; admin verifies.
21	Admin Panel — Core	M11 (Section 19.1-19.4)	Doctor verification, booking oversight, fraud flags, call-center bookings.
22	Maps — route optimization + live location	M4 extension (Section 22.5, 22.7)	Doctor's day-route optimized; patient watches doctor en route.

→ "Release 3": Milestones 17-22.

Phase F — Governance & polish (Release 4)

#	Milestone	Slice of	Deliverable
23	Admin — Settings & Reports	M12 (Section 19.5-19.6, 20)	Platform-wide config UI, KPI dashboard, report exports.
24	Compliance hardening		

#	Milestone	Slice of	Deliverable
		M13 extension (retention automation, GDPR/HIPAA-specific controls)	Beyond baseline RBAC/encryption already shipped in Phase A-C.
25	Family members module	M1 remainder (Section 3.3)	Book on behalf of spouse/children/parents.
26	Favorites + saved payment methods	Patient Portal polish (Section 14)	Quality-of-life features deferred from Release 1.

→ **"Release 4": Milestones 23-26.**

Phase G — Unsequenced future scope. Items in Section 23 (Future Unsequenced) can be added later once prioritised: AI triage, home nursing, vaccination, ambulance, multi-language UI, WhatsApp notifications, voice-note dictation.

27. Traceability Note

Requirement IDs in this document (FR-x.x, NFR-x) map directly to: - QA test case references - Future change-request diffs against this baseline
